Grade	**0.00** out of 15.00 (**0**%)

Question **1**

Not answered

Marked out of 1.00

In Merge Sort, what happens after dividing the input into smaller parts?

a. The parts are ignored
b. Each part is searched for a specific element
c. The parts are merged without sorting
d. Each part is sorted independently

The correct answer is: Each part is sorted independently

Question **2**

Not answered

Marked out of 1.00

What is a characteristic of the merge sort algorithm?

a. It does not require recursion
b. It is based on the divide-and-conquer approach
c. It sorts data using a single pass
d. It is less efficient than bubble sort

The correct answer is: It is based on the divide-and-conquer approach

Question **3**

Not answered

Marked out of 1.00

What type of problems can sorting help solve efficiently?

a. Duplicates
b. All of the above
c. Selection
d. Searching

The correct answer is: All of the above

Question **4**

Not answered

Marked out of 1.00

What is sorting in the context of computer science?

a. Deleting data from a list
b. Inserting data into a list
c. Arranging data in a particular format
d. Searching for data in a list

The correct answer is: Arranging data in a particular format

Question **5**

Not answered

Marked out of 1.00

Why is sorting important for selection operations?

a. It makes the data unsorted
b. It complicates the selection of items
c. It slows down the process
d. It makes it easier to select items based on their relationship to the rest of the items

The correct answer is: It makes it easier to select items based on their relationship to the rest of the items

Question **6**

Not answered

Marked out of 1.00

In the context of sorting, what does the divide-and-conquer approach involve?

a. Sorting data sequentially
b. Rearranging data without sorting
c. Dividing the input into parts, solving each part, and combining the solutions
d. Sorting data in a single pass

The correct answer is: Dividing the input into parts, solving each part, and combining the solutions

Question **7**

Not answered

Marked out of 1.00

Which algorithm typically follows a divide-and-conquer structure?

a. Linear Search
b. Merge Sort
c. Bubble Sort
d. Binary Search

The correct answer is: Merge Sort

Question **8**

Not answered

Marked out of 1.00

_____is putting an element in the appropriate place in a sorted list yields a larger sorted order list.

a. Distribution
b. Selection
c. Insertion
d. Extraction

The correct answer is:
Insertion

Question **9**

Not answered

Marked out of 1.00

What does the Bubble Sort algorithm primarily focus on during each pass?

a. Bubbling up the smallest element
b. Dividing the list into halves
c. Sorting the entire list in one pass
d. Bubbling up the largest element to its correct position

The correct answer is: Bubbling up the largest element to its correct position

Question **10**

Not answered

Marked out of 1.00

Which of the following best describes the term "sorting" in computer science?

a. Finding a specific element in a list
b. Removing duplicates from a list
c. Merging two datasets
d. Arranging data in a specific order

The correct answer is: Arranging data in a specific order

Question **11**

Not answered

Marked out of 1.00

What is Bubble Sort known for?

a. Bubbling up the largest element to its correct position with each pass
b. Using the divide-and-conquer approach
c. Sorting data in a non-sequential manner
d. Being the most efficient sorting algorithm

The correct answer is: Bubbling up the largest element to its correct position with each pass

Question **12**

Not answered

Marked out of 1.00

What is the primary benefit of using sorting algorithms in programming?

a. Decreases the efficiency of algorithms
b. Makes code execution slower
c. Provides a basis for other algorithms to work efficiently
d. Makes data harder to manage

The correct answer is: Provides a basis for other algorithms to work efficiently

Question **13**

Not answered

Marked out of 1.00

Why is it advantageous to sort data before performing duplicate analysis?

a. It has no effect on the analysis process
b. It complicates the analysis process
c. It makes the analysis slower
d. It allows for quicker identification of duplicates

The correct answer is: It allows for quicker identification of duplicates

Question **14**

Not answered

Marked out of 1.00

What is a significant characteristic of Bubble Sort?

a. It recursively sorts subproblems
b. It divides the list into sublists
c. It bubbles up the largest element in each pass
d. It uses the heap data structure

The correct answer is: It bubbles up the largest element in each pass

Question **15**

Not answered

Marked out of 1.00

What is one advantage of sorting a list before performing a search operation?

a. It allows for faster searching
b. It increases the number of comparisons needed
c. It has no effect on the search operation
d. It makes the search operation slower

The correct answer is: It allows for faster searching
